

If you would like to know more about lock bumping and the Master Lock locks we have installed for your protection, visit www.bumpstopsecurity.com

And please, feel free to contact us with any questions regarding security or other issues.

**YOUR RESIDENCE IS NOW
PROTECTED BY BUMPSTOP®
DOOR SECURITY.**

THE THREAT OF LOCK BUMPING.

Lock bumping is a fast, simple, undetectable way to “pick” a standard door lock or padlock – exposing individuals, families and property to danger.

Once a locksmith trade secret, videos are now found on sites like YouTube showing how kids lock bump their way past pin tumbler locks -- easily, with just a tap on an ordinary looking key, leaving no evidence of a break-in. Do an internet search and you'll find these bump keys readily available for as little as \$8. If you consider that troublesome, remember that without forensic evidence of forced entry, insurance claims for lost property can be denied – the door was just left unlocked.

Concerned, too? No need.

YOUR RESIDENCE IS NO LONGER AT RISK OF LOCK BUMPING.

We're serious about our responsibility for your security. Your Property Management Team has replaced all exterior and entry door locks with new Master Lock® BumpStop® door hardware to protect this building and our residents.

This new security hardware has been independently tested to ASTM criteria and proven to protect against unauthorized entry through lock bumping. In fact, during this testing, even 360 “bump” attempts by trained locksmiths couldn't override and open BumpStop® protected pin tumbler locks.

It's simply the best bump resistant door hardware available.

BUMPSTOP® PROTECTION IS AVAILABLE FOR PADLOCKS AS WELL.

To protect all your possessions against lock bumping, make sure you use Master Lock padlocks protected with BumpStop® Advanced Cylinder Technology. For lockers, toolboxes, boats, bikes.... Ask your locksmith for the exact Master Lock padlock you need with BumpStop® protection.
